CLOUD SECURITY
SERVICES

Take a holistic look at your cloud security

As organisations embrace cloud to drive their digital transformation by adopting SaaS, Modern Workplace tools and Public Cloud platforms, their security landscape is changing. As a consequence, the vulnerabilities and exploits organisations face are also changing, as are the security tools that protect against these threats.

Our Workshop, Find and Fix approach helps you to identify any gaps in your cyber security strategy and easily assess the current impact on your IT environment as well as fixing any holes in your cloud security.

Cloud security considerations

Risk and compliance
The cost of a data breach has become more severe. It's no longer purely a financial penalty or the operational resolution costs (although these are increasing) that are impacting the organisation. As user and customer reviews gain greater authority, data breaches and poor service can cause significant reputational damage and deplete hard won trust and brand identity.

Lack of skills
As everyone in the cyber security industry with responsibility for hiring knows, skill sets are short, candidates with cloud security skill sets are shorter still and this is growing year on year. To alleviate this, some organisations are choosing to outsource tasks to service providers so choosing a good partner can significantly ease this pain.

The opportunity
An increased and compliant cyber security posture enables organisations to set themselves above others and lead the way as the most secure in their sector. This builds trust, provides reassurance for customers and service users and can make cyber security a part of an organisations unique selling points.

Securing your cloud with Trustmarque

Most cloud service providers, like Microsoft or AWS, protect against intrusions and attacks on their systems, underlying application and infrastructure. However, it is the organisation who is using the cloud services to secure their own usage and data, including how the service is used, who can access their data, and who is sharing what with whom.

To protect your organisation against threats when using the cloud, we cover six key areas, these are:

- **Visibility** of your whole IT estate and your users' behaviour
- **Threat protection** against malicious activity
- **Data protection** to safeguard you most value assets
- **Governance** of systems and date to comply with rules and regulations
- **Identity** to ensure only authorised people have access
- **Infrastructure protection** of apps and systems whether in the cloud or as part of a hybrid solution

Why Trustmarque?

We have a wealth expertise and experience across the breadth of cloud solutions, whether that is advising, implementing or deploying innovative solutions. Our portfolio of services and partners give you access to the most relevant and advanced solutions to address the myriad of cyber security challenges you face. In addition, we have invested highly in staff training and are proud of our expertise as well as our relationships and certifications with the industry's leading vendors.

Founded in 2004 and acquired by Capita in 2013, we are a multiple award winning practise that has been in operation for 17 years. We are uniquely placed to leverage both the strength of our strategic ecosystem partners and Microsoft.

We have a team of dedicated Cyber Security professionals who are committed to helping you fight cyber crime. We have over 55 in-house engineers and a customer facing Security Managed Service, manned 24x7x365, providing industry-leading coverage over our Strategic Security vendors.
