SafeGUARD includes the ability to protect other cloud services, allowing you to protect data in AWS, Azure, OneDrive and a range of other cloud platforms. Removing the need for on-premise deployment of software or hardware.

Cloud to Cloud

SafeGUARD allows organisations to protect their data through a fully automated, encrypted and secure online backup and recovery service that is efficient, centrally managed and simple to use.

Fully customisable and highly scalable, it supports a wide range of operating systems and applications running on servers, desktops and tablets. It completely replaces backup media, eliminating the need for tapes and reducing primary storage.

The central management console addresses the challenges of provisioning, monitoring, maintaining and reporting on backup and recovery through a single interface, decreasing management overhead and reducing the costs attributed to traditional backup.

BETTER BUSINESS OUTCOMES

By eliminating the costs and data loss risks inherent in manual backup procedures, SafeGUARD supports Business Continuity and enables IT staff to focus on more strategic business initiatives.

SAFE GUARD APPLICATIONS

Office365 protection

Cloud solutions like O365 still require additional backup protection to mitigate against data loss and corruption. O365 protection from SafeGUARD helps you to ensure data protection, create retention policies, address compliance issues and carry out disaster recovery.

Ransomware protection

Ransomware attacks are becoming increasingly common with high-value data the target of criminals. SafeGUARD can help restore your data and mitigate the effects of an attack while preventing unplanned spend on ransom fees.
Why partner with Trustmarque on your datacentre modernisation

We focus on datacentre modernisation that goes beyond cost reduction and point solutions to create powerful new architectures that are optimised for digital workloads and digital first organisations.

We identify the right solutions from a vast network of partners to build new infrastructure and modernise existing set-ups so we can better support the applications required by your business now and in the future.

Our wide portfolio of next-generation infrastructure solutions includes; hyperconverged infrastructure, flash, scale-out, software-defined, and cloud-enabled technologies.

Backup and Recovery

Backup has never been so simple. Forever incremental backups ensure minimal data transfer by identifying and sending only changed data to ensure a highly efficient Backup solution.

- Intelligent File Inclusion and Exclusion
- Eliminate downtime to lessen the impact of risks and ensure Business Continuity
- Unthrottled recovery gaining instant data access
- Gain unlimited visibility of all your most critical data
- Cost control and reduction by paying for what you use

Disaster Recovery

With InstantData intelligence you can protect yourself from data loss by instantly protecting live data at the simple click of a button. FSR (Full System Recovery) takes the stress and complexity out of disaster recovery by automating the recovery of your systems.

- Easily recover physical, virtual or cloud-based machines
- Better mitigate risks due to security incidents and hardware failures
- Simultaneous access to data through central control centre
- Instant time to value with no capital outlay costs and no need to pay for stand-by hardware or a DR site

Archiving

Access your archived data immediately while significantly reducing your storage costs.

- Reduce the need for capital costs by freeing up primary storage
- Immediate access to archived data, whenever you need it
- Policy-driven, automated archiving minimises management time
- Simple to use with no training for the best end user experience

Search and Insight

Enterprise Reporting gives you access to powerful analytics, enabling you to discover and search the entirety of your data.

- Action and evidence compliance, including GDPR
- Search all live, backup and archive data, regardless of the location
- Quickly identify files that require action or deletion
- Management controls allow you to restrict permission, track searches and monitor all data deletions
