ENDPOINT
SECURITY

Evolution of the perimeter

We now live in a more digital environment and demand to have a connected experience wherever we are: whether that's in the office; at home; on the go at the local coffee shop, or even overseas. Devices are now a mix of corporate owned and personal, where your applications and data undoubtedly live in both cloud and on premise. The old perimeter we knew has now been stretched out of recognition.

With an explosion in both the quantity and quality of threats, securing your organisation requires a new focus. The new polymorphic nature of malware threats and the rise of ransomware means that endpoint security has to constantly adapt in order to keep up. Our technology experts can help you understand what security solutions are right for your organisation.

Your complete endpoint strategy

By working with Trustmarque, you can put in place a strategy and solutions that will benefit your organisation.

Protecting user identity – Employees are moving beyond the traditional protection of firewalls and your customers and partners are interacting with your business in new ways every day. A good endpoint strategy ensures your users can access your organisation easily and securely while allowing you to make risk-based decisions on what they can access to significantly reduce your risk of data breaches.

Ease of use – Users increasingly have to remember multiple passwords to access multiple different systems, implementing a Single Sign-On (SSO) authentication process that allows a user to access multiple applications with one set of login credentials.

Guard against next generation attacks – Machine learning is the "next gen" of endpoint and helps detect and protect against unknown threats. Next generation endpoint solutions look for patterns of behaviour to discover not only malware, but tactics, techniques and procedures, giving you an advantage over traditional signature-based tools.

Endpoint security from Trustmarque

Our endpoint security solutions transform and secure your organisation's endpoint protection and enable your users by using:

Machine Learning in next gen endpoint solutions detect unknown threats by looking for patterns of behaviour to discover not only malware, but tactics, techniques and procedures.

Exploit Mitigation is commonly used by attackers who use set of script technologies. Recognising and blocking these exploits is an effective additional layer of security at the endpoint.

Endpoint Detection and Response (EDR) has grown due to the increased focus on endpoint security, it monitors endpoint and network events and records this centrally where further investigation can take place.

Single Sign-On (SSO) reduces the the number of passwords users need to remember to access multiple different applications and systems.

Multi-Factor Authentication or using a secondary factor of authentication uses multiple ways to identify your users at appropriate times in their login process. This can stop brute force and credential spoofing attacks in their tracks.

Conditional Access as part of an identity strategy, this can examine not only the identity of the user, but the type and health of their device, where they're connecting from, what application they are trying to access, as well as the level of sensitivity of the data they want to access to spot weaknesses and anomalies.

Why Trustmarque?

Trustmarque helps you understand your organisation's true risk and exposure. Our experts will recommend the best solution for your organisation by understanding your unique requirements. We have a fine-tuned portfolio of services and partners that gives you access to the most relevant and advanced solutions. In addition, we have invested highly in staff training and are proud of our expertise as well as our relationships and certifications with the industry's leading vendors.

We are uniquely placed to leverage both the strength of our strategic ecosystem partners and Microsoft. Founded in 2004, acquired by Capita in 2013 and now a part of Trustmarque, our team is a multiple award-winning practice that has been in operation for 17 years. We have over 55 in-house engineers and a customer facing Security Managed Service manned 24x7x365 providing industry leading support coverage for our strategic security vendors.
