

Droplet Computing at Trustmarque

Trustmarque has partnered with Droplet Computing containers to help you to redefine the delivery of legacy applications. Droplet Computing greatly simplifies and reduces the cost of delivering applications by selling three things. Compatibility, Security leading to Compliance.

Why Droplet Computing?

Compatibility Droplet Containers run any Windows compatible generation of software application. So, the legacy applications that your business still needs to run that run on Dos, Win XP or 7 will be able to seamless run on any platform Droplet supports.

Security Droplet

Containers wrap a layer of Security around your applications blocking all inbound traffic. The security of the container is frequently penetration tested both by our customers and by independent third-party experts. The last round of commissioned pen testing was conducted by the NCC Group PLC.

ABOUT DROPLET COMPUTING

We are a software-based container solution that works by taking your apps and installing them, unchanged, inside a secure, and isolated containerised environment. In turn, this containerised environment is portable and can be delivered to your device regardless of OS, executing locally and offline. Alternatively, it can be delivered using Windows app publishing solutions for multi-user deployments.

Compliance

Droplet works closely with its customers to help them achieve the level of compliance required to meet such standards as NIST, Cyber Essential Plus or other regulatory standards.

Solutions with Droplet and Trustmarque

Whatever your challenge may be whether it be you need additional security to continue running business critical legacy applications. Or legacy server infrastructure or that you want a more cost-effective simpler method to deliver any applications to end users Droplet Containers can meet your compliance needs.

THE PROBLEM

Old applications running on historic operating systems, (such as Win XP & Server 2003)

THE SOLUTION

We seamlessly transfer the applications into a secure container and giving you access to a whole new operating system.

THE OUTCOME

A compatible, secure, and compliant offering for your legacy servers and applications.
