

Data Policy

Enable remote work with confidence and help employees stay productive by ensuring that company policies are respected. Enforce acceptable use, eliminate shadow IT, prevent excessive data usage and educate end users on their data use across cellular, roaming, and Wi-Fi networks.

Enforce Acceptable Use Policies

Content filtering with Data Policy allows organizations to define which websites and apps can be accessed from company-owned mobile devices. Jamf ensures online behavior is compliant with acceptable use policies by providing real-time visibility into usage and category-based policy controls to automate enforcement.

Monitor for Shadow IT

Organizations that operate in regulated industries or handle sensitive information are expected to stay compliant with various information security and industry policies. Jamf can prevent sensitive corporate data from being exposed—either through a browser or through the native mobile app—by blocking access to unsanctioned services.

Manage usage in real-time

Elevate your security posture by allowing only secure and trusted devices to access business applications. Threat Defense continuously monitors a broad set of telemetry and contextual inputs that can be used to prevent application access when an endpoint is compromised or at high risk. Adaptive access policies can be enforced natively through the Zero Trust Network Access solution or Jamf's management solution, Jamf Pro.

Data Policy in stats

Connectivity through a company-provided mobile hotspot requires end users to utilize the service responsibly. Jamf enables organizations to configure automated policy controls that restrict access to inappropriate content and apps that are not business critical.

1 in 7

employees access adult content on a work-issued mobile device each week

>50%

of corporate data usage is not business critical

70+

predefined content filtering categories available for policy controls across both web applications and native mobile apps

“Being able to control the types of websites and content that people access and having that granular level of visibility means the corporate device is seen as a tool rather than a device employees just take away thinking it’s not controlled.”

Data Policy Features

Real-time Insights

Monitor data usage without waiting for the bill using Jamf’s real-time insights and usage analysis tools.

Content filtering

Set intelligent rules to prevent inappropriate websites and apps from being accessed. Ensure that usage is compliant with HR, IT, and regulatory policies.

Real-time Policy Control

Configure cap policies to be applied when data usage thresholds are reached. Customize alerts and notifications for users and admins.

Fully customizable

Apply policies to individual users, groups, or the organization as a whole. Tailor the predefined content filtering categories with customized allow and block lists.

Any mobile device, any ownership model

Data Policy supports mobile devices and laptops, allowing you to choose the device that’s best for your business.

Network aware

Create and enforce policies for different networks. Data Policy automatically detects the network to allow Wi-Fi users to have content filtering applied without data management.

Gloucestershire Hospitals
NHS Trust

“We cap users on a monthly basis, while allowing business-critical apps so they can still do their job should they reach their cap”
